

Picture the idea. Recall the answer.

Reveal a source-linked concept diagram, then explain the idea without looking. Diagrams organize evidence; they do not interpret PDF images.

CARD 01 · ANSWER

What happens when two positive charges are brought near each other?

Supporting passages: S1 · Study Atlas

They repel.

What happens to force when separation doubles?

Supporting passages: S2 · Study Atlas

It becomes one quarter of the original force.

Why should a test charge be small?

Supporting passages: S3 · Study Atlas

So it does not significantly disturb the source charges.

Is electric potential a vector?

Supporting passages: S4 · Study Atlas

No. It is scalar; electric field is vector.
